of their competition and to increase profitability.

Flexible Packaging in Pharmaceutical industry

Film barriers: In flexible packaging, there are different barrier properties for air, moisture, and flavor. Coatings can be added to films to change and extend the product's shelf life and enhance freshness. Some foods and beverages require a barrier. Some, such as meat products, require breathability in their wrap.

With the rise of the modern packaging in pharmaceutical industry, brands exploit the power of distinctive packaging design to stand out from the rest of their competition and to increase profitability. Apart from the basic requirement of protecting the drug, the pack also needs to be appealing & distinct enough to promote itself.

Flexible Packaging in Pharmaceutical industry

Post author. By Scoute McNelay. Post date. June 16, 2020. A polymer is a molecule, made from joining together many small molecules called monomers.

market is estimated to reach \$ 73 billion by 2020.

What Types Of Products Are There In Flexible Packaging?

To meet the definition of sustainable packaging, biodegradable materials used in packaging must break down in a reasonable amount of time. As sustainable packaging options, our SmartPack-BDG™ and PetPack-BDG™ give both producers and consumers the premium product they want without leaving waste behind. They're the easiest sustainable packages to dispose of—you can simply throw them in your regular garbage, and they will begin

Flexible packaging adhesives are predominately based on urethane and acrylic chemistry. Backbone options create unique performance properties. Changes in composition determine whether the adhesive will be solvent, water or solventless based. While the starting components are limited to FDA compliance lists, the resultant adhesives are complex.
