The questionnaire of family functioning: a preliminary validation of a standardized instrument to evaluate psychoeducational family treatments. Roncone R (1), Mazza M, Ussorio D, Pollice R, Falloon IR, Morosini P, Casacchia M. The aim of the study was to develop and preliminarily validate a self-completed questionnaire that could help in the assessment of families before and during psycho-educational interventions.

The questionnaire of family functioning—a preliminary ...

The qualities of strong families are described, and assessment tools for measuring family strengths are reviewed. Empirical evidence demonstrating the reliability and validity of the Family Functioning Style Scale is presented. The article concludes with a discussion of the use of family strengths assessment data for intervention purposes.

Assessing Family Strengths and Family Functioning Style ...

Description The Family Assessment Device (FAD) is based on the McMaster Model of Family Functioning (MMFF), a clinically oriented conceptualization of families. It is a screening instrument only consisting of 53-items. The model identifies six dimensions of family functioning.

An extensive body of research exists that indicates numerous child clinical outcomes are highly associated with family functioning. Family functioning is a broad term that describes the various ways that family members interact which potentially impact the client's mental health functioning.

Family Functioning Scale Survey

This paper describes the McMaster Family Assessment Device (FAD), a newly developed questionnaire designed to evaluate families according to the McMaster Model of Family Functioning. The FAD is made up of seven scales which measure Problem Solving, Communication, Roles, Affective Responsiveness, Affective Involvement, Behavior Control and General Functioning.

THE McMASTER FAMILY ASSESSMENT DEVICE—Epstein—1983 ...

This study investigated family functioning, family stage and eating disorder risk. A sample of 140 females (aged 18–59) completed a family functioning questionnaire (ICPS) and the Eating Disorder Risk scale (EDI-3). Consistent with previous research, cluster analysis identified two profiles of family functioning: an authoritative style (high intimacy and high democratic parenting, with low conflict) and an authoritarian cluster (elevated conflict scores and significantly lower intimacy and ...
