How To Make A Recurve Bow - The Basic Woodworking

A recurve bow is a much
simpler style of the bow
than the more popular
compound bow. The term
“recurve” comes from the way
the bow curves away from the
shooter at the ends. This
allows the bow to propel the
arrow with more power and
energy than a traditional
straight-limbed bow. This

Beginner's guide to building a hickory longbow. There is something enchanting about the idea of crafting something from scratch with one's own hands - looking at a piece of dead wood and seeing something more and then breathing life into it again in the shape of a bow.. Hundreds of thousands of people have made their own bow from wood, and they all started somewhere.

There are several woods that are suitable for bow-making, among them hickory, Osage orange, yew and lemonwood. However, maple is the most common core wood used in glass-faced and backed bows because it is a consistently hard dense wood, very straight-grained, and readily available in good clear grades.

Hi Bingham! I've been building laminated wood bows for several years, and at the request of a friend earlier this spring I ordered a limb package (50#, 2"wide) and built him a 68" takedown recurve with bamboo and uniweft core, using your plans. It was very successful and we were both very happy with the results.
