Online Library Tropical Forest Census Plots Methods And Results From **Protocol for inventory of mapped plots in tropical forest**

We estimated the dry, living, above-ground biomass (AGB) standing stock and its turnover in a 50-hectare forest plot located in moist tropical forest on Barro Colorado Island, Panama. The estimates were obtained using inventory data collected every 5 years from 1985 to 2000, including measurements of all trees \geq 1 cm diameter.

Spatial and temporal variation of biomass in a tropical ...
