### Designing the User Interface in Visual Basic 2019

Since Visual Basic 2013 is a GUI-based programming language, the first step in developing a VB2013 application is to build a graphical user interface. In order to build a graphical user interface, you need to insert controls from the toolbox to the form and then specify their properties. The default form is also a control by itself, therefore, you can change its properties first before adding additional controls.
