Viruses as nanotechnology building blocks for materials ...

Virus nanotechnology is the use of viruses as a source of nanoparticles for biomedical purposes. Viruses consist of a genome and a capsid; and some viruses are enveloped. Most virus capsids measure between 20-500 nm in diameter. Because of their nanometer size dimensions, viruses have been considered as naturally occurring nanoparticles. Virus nanoparticles have been subject to the nanoscience and nanoengineering disciplines. Viruses can be regarded as prefabricated nanoparticles. Many different
